(54) TACKY AGENT COMPOSITION FOR PERCUTANEOUS APPLICATION AND ITS PRODUCTION

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a tacky agent composition for percutaneous application, capable of maintaining self shape retention and tack of a preparation for percutaneous application and raising percutaneous absorption (effect concentration in blood) of a medicine.

SOLUTION: This tacky agent composition for percutaneous application comprises (a) a polymer substance which contains a carboxyl group or its salt in a chemical structure and is soluble in a lower alcohol, (b) a lower alcohol or the lower alcohol and a polyhydric alcohol and (c) the metal soap as essential components. Consequently, a preparation can be mixed with any amount of the lower alcohol excellent in absorption promoting action to extremely improve percutaneous absorption of a medicine.

LEGAL STATUS

[Date of request for examination] 15.11.2002

[Date of sending the examiner's decision of rejection] 16.03.2005

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
